WAR TETANUS: ACTION OF ANESTHETIC INFILTRATIONS OF THE SYMPATHETICS. [1961] 8p.
Order from SLA mi\$1.80, ph\$1.80 61-14497

Trans. of la Presse Médicale (France) 1940, v. 48
[no. 91/92] p. 935-937.

Fourteen cases of tetanus observed at the time of the German occupation of France are described. Most of the acute forms were complicated by causalgia in wounds or amputation stumps. In these cases, even though the infection itself was controlled by traditional means, the peripheral algia became a point of departure for renewed general tetaniform reactions which are assumed to have been the result of the hypersensitivity of the nervous system. Patients in such a situation literally may die of pain. Procaine infiltration of the sympathetics is the effective means of therapy.
